January 28 Agenda

Discuss beta testing results from break

We'd like to gain any feedback given from people who used the product over break.

List and prioritize remaining accessibility errors

We'd like to get a feel for what should be implemented for the accessibility errors we haven't yet done. Additionally, we also want to determine what should be changed/added to existing accessibility error implementations.

Word

Error Name	Notes	Priority
Proper heading ordering	Fix GUI bugs	8
Simulating heading with formatted text	Add better logic to determine when this is happening	6

PowerPoint

Error Name	Notes	Priority
Ungrouped images	Partially implemented, but need to determine other heuristics	3
Missing Titles	95% done, just need to check Mahmud's edge case	7
Every slide should have a layout	Haven't yet completed. Need to research how to determine if a slide has a layout.	4
Dynamic media should have alternative text	Haven't implemented. Should be a simple one-day undertaking.	5

Both

Error Name	Notes	Priority
No images in tables	Not completed. Discuss whether this is an error in the first place.	9
Alternative text for charts	Discuss where we'd like to take this.	1
Avoid empty text-boxes/images	Hasn't yet been implemented for PowerPoint.	2

Discuss what still needs to be completed with the GUI

Mahmud has some new ideas about what we can do with the GUI to allow the user to have a summarized view of the accessibility level of the document.

Determine a reasonable timeline for the remainder of the project

Depending on how complex our chart implementation is, we feel that we can have the application ready for testing by the end of February (February 29th).
